

Wilmington Global Alpha Equities Fund

Class A: WRAAX Class I: WRAIX

Objective

Long-term growth of capital with lower volatility than broader equity markets

Approach

- Global defensive equity strategy
- Emphasis on downside mitigation
- Combination of high active share, fundamental long only equity strategies with a futures-based hedging program designed to reduce market exposure to typically 35-45% net long

Sub-advised by:

WELINGTON
MANAGEMENT®

Strategy

Independent investment teams located in the U.S., Asia, and U.K. managing the following strategies:

- 12.89% Consistent Free-Cash Flow (Boston)
- 9.24% Contrarian (Boston)
- 9.90% Disciplined Mgt. (Boston)
- 12.63% Growth (Boston)
- 13.50% Income (Boston)
- 14.24% Quality (London)
- 3.17% Quality Value (Tokyo)
- 4.22% Quality Growth¹ (Hong Kong)
- 12.07% Risk Mgt. Overlay (Boston)

¹ The Fund began managing the Quality Growth sleeve effective June 4, 2020.

Exposure (%)		Market cap allocation (%)	
Long	89	>\$50 billion	44.9
Short	-45	\$10 to \$50 billion	29.6
Gross	133	\$2 to \$10 billion	12.6
Net ²	44	< \$2 billion	2.4

²Net exposure is calculated by subtracting the percentage of the fund's capital invested in short positions from the percentage of the fund's capital invested in long holdings. Calculations show notional exposure of futures.

Current performance may be lower or higher than that shown. Investment return and principal value will fluctuate. Shares, when redeemed, may be worth more or less than their original cost. Class A shares have a maximum front-end sales charge of 5.50%. Total returns assume the reinvestment of all distributions at net asset value and the deduction of all expenses. Performance would have been lower if fees had not been waived in various periods. Performance is available at www.wilmingtonfunds.com. Performance shown prior to January 31, 2017, was for the Wilmington Multi-Manager Alternatives Fund and may be subject to different expenses and sales charges than are currently being applied to the Wilmington Global Alpha Equities Fund. Performance shown represents past performance and cannot guarantee future results.

³The fund's advisor, distributor and shareholder services provider have agreed to waive their fees and/or reimburse expenses so that total annual fund operating expenses paid by the fund's Class A and Class I Shares will not exceed 1.49% and 1.24%, respectively, not including the effects of dividends or interest on short positions, acquired fund fees and expenses, taxes, or other extraordinary expenses. This waiver may be withdrawn after August 31, 2022, or with the agreement of the fund's Board of Trustees. Please see the prospectus for more information on fees, expenses, and expense limitation arrangements, if any.

You should consider a fund's investment objectives, risks, charges, and expenses carefully before you invest. Information about these and other considerations is contained in the fund's prospectus, which is available on our website, www.wilmingtonfunds.com. Please read the prospectus carefully before investing.

Important Information And Risk Disclosure

All investments involve risk, including possible loss of principal. Mutual fund investments that focus on alternative strategies are subject to increased risk and loss of principal and are not suitable for all investors. The fund, Sub advisors and underlying strategies may use aggressive investment strategies that are riskier than those used by typical mutual funds. If the fund and Sub-advisors are unsuccessful in applying these investment strategies, you may lose more money than if you had invested in another fund that did not invest aggressively. The fund is subject to risks associated with the Sub-advisors making trading decisions independently, investing in other investment companies, using a particular style or set of styles, basing investment decisions on historical relationships and correlations, trading frequently, using leverage, making short sales, being non-diversified and investing in securities with low correlation to the market. The use of leverage may magnify losses. The fund is also subject to risks associated with investments in foreign markets, emerging market securities, small cap companies, debt securities, derivatives, commodity-linked instruments, illiquid securities, asset-backed securities and CMOs. Please see the prospectus/summary prospectus for information on these and other risk considerations.

Diversification does not ensure a profit or guarantee against a loss. There is no assurance that any investment strategy will be successful. Any investment in the fund should be part of an overall investment program rather than, in itself, a complete program. Because the fund invests in underlying mutual funds or other managed strategies, an investor will bear the management fees and operating expenses of the "Underlying Strategies" in which the fund invests. The total expenses borne by an investor in the fund will be higher than if the investor invested directly in the Underlying Strategies, and the returns may therefore be lower.

Indexes are not available for direct investment. Investment in a security or strategy designed to replicate the performance of an index will incur expenses such as management fees and transaction costs which would reduce returns.

Wilmington Global Alpha Equities Fund

Class A: WRAAX Class I: WRAIX

Alpha is a measure of the difference between a portfolio's actual returns and its expected performance, given its level of risk as measured by Beta. Simply stated, it is the portfolio return minus the benchmark return multiplied by Beta. A positive Alpha figure indicates the portfolio has performed better than its Beta would predict. A negative Alpha indicates the portfolio performed worse than expected based on its level of sensitivity to market movements. Thus it is possible for a portfolio to outperform an index and still have a negative Alpha.

Beta is a measure of a portfolio's sensitivity to market movements, or systematic risk. The larger the Beta, the more volatile the historical performance. Beta compares the portfolio's excess return over the risk free rate, typically represented by the return of 3-month Treasury Bills, to the benchmark's excess return over the risk free rate. A Beta of 0.85 indicates that the portfolio performed 15% worse than the market's excess return during up markets and 15% better during down markets.

Collateralized mortgage obligation (CMO) is a fixed income security that uses mortgage-backed securities as collateral. Like other structured securities, CMOs are subdivided into graduated risk classes, called tranches that vary in degree based on the maturity structure of the mortgages.

Commodity linked instruments or securities are linked to one or more commodity prices.

Derivative is a contract between two or more parties whose value is based on an agreed-upon underlying financial asset (like a security) or set of assets (like an index). Common underlying instruments include bonds, commodities, currencies, interest rates, market indexes, and stocks.

Leverage is a ratio of a company's loan capital (debt) to the value of its common stock (equity).

Market Capture (Upside & Downside) *Upside capture* is calculated by taking the portfolio return during periods when the benchmark had a positive return and dividing it by the benchmark return in those periods. *Downside capture* is calculated by taking the portfolio return during the periods of negative benchmark performance and dividing it by the benchmark return during those periods. An upside capture over 100 indicates a portfolio has generally outperformed the benchmark during periods of positive benchmark returns. Meanwhile, a downside capture ratio over 100 indicates that a portfolio has lost more than its benchmark in periods when the benchmark was negative. If a portfolio generates opposite returns – e.g., negative when the benchmark is positive – the market capture ratio will be negative.

Maximum drawdown is the largest peak-to-trough decline in a portfolio or stock's value before a new peak is achieved.

Sharpe ratio refers to a risk-adjusted measure calculated using standard deviation and excess returns to determine reward per unit of risk. The higher the ratio, the greater the risk-adjusted performance.

Short sale is the sale of an asset or stock the seller does not own. It is generally a transaction in which an investor sells borrowed securities in anticipation of a price decline; the seller is then required to return an equal number of shares at some point in the future.

Standard deviation indicates the percentage by which a portfolio's performance has varied from its average performance in any given month during the period indicated. The higher the standard deviation, the greater the range of performance, indicating greater volatility.

HFRX Equity Hedge Index: Equity Hedge strategies maintain positions both long and short in primarily equity and equity derivative securities. A wide variety of investment processes can be employed to arrive at an investment decision, including both quantitative and fundamental techniques; strategies can be broadly diversified or narrowly focused on specific sectors and can range broadly in terms of levels of net exposure, leverage employed, holding period, concentrations of market capitalizations and valuation ranges of typical portfolios. Equity Hedge managers would typically maintain at least 50%, and may in some cases be substantially entirely invested in equities, both long and short. HFR, Inc. (HFR) utilizes a UCITSIII compliant methodology to construct the HFRX Hedge Fund Indices. The methodology is based on defined and predetermined rules and objective criteria to select and rebalance components to maximize representation of the Hedge Fund Universe. HFRX Indices utilize state-of-the-art quantitative techniques and analysis; multi-level screening, cluster analysis, Monte-Carlo simulations and optimization techniques ensure that each Index is a pure representation of its corresponding investment focus. The HFR Indices are being used under license from HFR, Inc., which does not approve of or endorse any of the products or the contents discussed in this material.

The **MSCI All Country World Index** is provided as a *reference for global equity markets generally* and measures large- and mid-cap equity performance across 22 developed and 27 emerging market countries. It represents approximately 85% of the float adjusted market capitalization in each country.

Indices are not available for direct investment. Investment in a security or strategy designed to replicate the performance of an index will incur expenses, such as management fees and transaction costs, which would reduce returns.

This material does not constitute a recommendation of a particular security, nor is it an offer to sell, or solicitation of an offer to buy, fund shares. Information herein is not intended to be a forecast of future events, a guarantee of future results or investment advice.
